

C# Advanced Project

Cairo Coding School

Project Quiz / Exam System Overview

- This is the previous project. You can make a copy of the current code.
- Convert the SQL to LINQ

Project

Quiz / Exam System

LINQ

- Return all course names with their teacher names and category
- Return all quiz names with the number of questions in each quiz
- Return all questions for a specific quiz
- Return all student names and the course name they are enrolled in for a specific course
- Return the number of quizzes in a specific course
- Return all courses with their teacher, including courses that have no teacher assigned

Project

Quiz / Exam System

LINQ

- Calculate the average quiz duration
- Calculate the average student score per quiz
- Show student name, student answer, correct answer, and score per quiz

Project

Quiz / Exam System

LINQ

- Get courses with more than 5 students
- Get courses that have quizzes
- Add Admin details
- Generate a report that shows how a specific student performed across quizzes and courses.
 - Student Name , Course Name , Quiz Name , Total Score , and Result (Pass / Fail)

Project

Project: Event Management System

Overview

The Event Management System is a console-based application designed to manage events, venues, organizers, attendees, and tickets. This system will allow users to track events, assign organizers and venues, register attendees, and manage ticket sales and check-ins. It will be implemented using C# classes, SQL database design with relationships, and LINQ queries to perform complex data operations.

Project: Event Management System

- Organizer Properties:
 - Id, Name, ContactEmail
 - Represents the person or organization hosting events.
- Venue Properties:
 - Id, Name, Location, Capacity
 - Represents the physical location where events are held.
- Event Properties:
 - Id, Title, OrganizerId, VenueId, EventDate
 - Represents a specific event organized by an organizer at a venue on a date.
- Attendee Properties:
 - Id, Name, Email
 - Represents a person attending one or more events.
- Ticket Properties:
 - Id, EventId, AttendeeId, Price, CheckedIn
 - Represents a ticket purchased by an attendee for a specific event.

Project

Project: Event Management System

- OOP Requirements for console app
 - Proper encapsulation of properties.
 - Constructors for initializing objects.
 - Implement at least one inheritance or interface if needed
- SQL Requirements for SQL design
 - Include at least 5–10 sample rows per table for testing.
 - Ensure foreign key relationships are properly defined.

Project

Project: Event Management System

- The console app should implement LINQ queries that cover:
 - Get all events organized by a specific organizer.
 - Get all attendees for a specific event.
 - Total ticket revenue per event.
 - Number of attendees per event.
 - Upcoming events sorted by date.
 - Attendees who didn't check in.
 - Most attended events or top revenue-generating events.
 - Event with organizer and venue info.
 - Attendees attending multiple events
 - Events that are fully booked.
